M. Averbach.

REPRESENTATIVES ON THE TEACHERS' RETIRE-
MENT FUND BOARD.—E. McGrath, B. B. Smith,
Mrs. J. MacLennan.

These Committees meet at call of Chairman

ANNUAL REPORT OF SCHOOL MANAGEMENT COMMITTEE

Winnipeg, December 30th, 1933

Mr. Chairman and Members of the Board:

Your School Management Committee beg to submit the following report of the operation of the schools under your direction for the year ending 31st December, 1933.

Statistics regarding enrolment, attendance, promotion and withdrawal of pupils, together with figures relating to the operation of the various auxiliary services, are contained in the tables appended hereto. For the most part these deal with the educational year which began in September, 1932, and ended in June, 1933. During this period the schools were open 188 days.

Enrolment

The total number of pupils enrolled was 40,465, as compared with 41,371 for the previous year. The average monthly enrolment for the school year was 38,375, the largest number present during a single month being 38,876, the number attending during April. Table IV shows the percentage of attendance in the several grades. The average daily attendance for the last school year was approximately 93 per cent. of that possible during the period of enrolment. Of the 40,465 pupils enrolled during the school year 35,683 had been on the register the previous year;

2,936 were beginners who had not previously attended school; 1,284 were received from schools outside Manitoba and 562 from schools in Manitoba other than the Winnipeg Public Schools.

The table showing the distribution, according to grade, of pupils on register June 30th, 1933, gives an enrolment of 25,330 for the Elementary grades (1 to 6); 10,062 for the Intermediate grades (7, 8 and 9); and 5,073 for the High School grades (10 and 11). As compared with the corresponding figures for the year 1932 this represents a decrease in elementary enrolment of 1,157, a decrease of 35 in the enrolment of the Intermediate Schools and an increase of 289 in the High School enrolment. This feature of school statistics showing decreased enrolment of junior and increased enrolment of senior pupils is common throughout the Dominion of Canada. Present indications are that the peak enrolment has been reached for the time being and that a general decrease in enrolment even in the higher grades may be expected. This opinion is borne out by the enrolment figures so far available for the present school year which show some decrease in High School enrolment over last year, due in part, however, to the regulation of the Board which prohibited students who failed in Grade XI to return to school in September. The same conclusion will be reached by a study of the table of distribution of pupils according to age which shows that the number of pupils of lower ages is not sufficient to continue the enrolment of pupils of higher ages at its present figure.

Progress of Pupils

The table of promotions shows that 30,202 pupils in the first ten grades received promotion during the year and that 327 of these were promoted twice. In addition to these, 1,574 pupils wrote on the Departmental examinations for Entrance to the University or admission to the Normal School course for second class teachers. 734 pupils in Grade XI passed in all subjects on which they wrote, 375 passed in all but one subject

and 235 in all but two, while the remaining 230 failed in more than two subjects. Reports of these examinations received from the Department of Education show that students of Winnipeg High Schools wrote 10,079 papers and received standing in 8,419 or 83.5%.

As in former years a vacation school was conducted during the summer months for pupils from grades six to ten, inclusive, who had failed to secure promotion in one or more subjects during the school year. 230 students were enrolled in this school who at the end of the school term wrote on 461 papers, satisfying the examiners in 343 or more than 74%. 203 students or 88% of those attending secured their promotion to the next grade thus saving a year, which otherwise would have been lost through retardation. A fee of \$10.00 was charged each pupil for the full course of six weeks, an amount which was found sufficient to conduct this school without cost to the Board.

By regulation of the Board passed during the year, students of Grade XI who failed to obtain standing in the final examinations conducted by the schools and the Department of Education were not permitted to re-enter school in September. To provide in some measure for these students, a second vacation school was organized to which these pupils were admitted free of charge. Reports show that 290 pupils attended this school in July and 301 in August. 230 students wrote Departmental examinations passing in 310 papers out of 518 papers written. In addition 25 students wrote final examinations set by the School and secured standing in 36 papers. As further provision for these students known as "Grade XI repeaters" the Board has permitted them to attend classes in the Evening Schools free of charge during the present school year. 141 such students are enrolled in Evening School classes taking work necessary to complete Grade XI. They will write their examinations on the completion of the Evening School term late in April or early in May. While the exclusion of these pupils from day-school classes was prompted by considerations of

economy, the measure has removed from the High Schools a problem that was yearly becoming more serious. With comparatively few exceptions pupils of this group fail through lack of application to their studies, their presence in the school in the year following failure increases the proportion of students with lack of serious purpose and interferes with the progress of others. Moreover, the Board's action has had a salutary effect on those students now in High School, who may be inclined to treat too lightly the privileges of education offered to them.

Organization of Schools

The schools of Winnipeg have for some years been organized in three main divisions. Elementary Schools: Grades 1 to 6 inclusive; Intermediate Schools: Grades 7, 8 and 9; and High Schools: Grades 10, 11 and 12. Since June, 1932, Grade 12 classes have not been formed, so that at present the High School department includes only Grades 10 and 11.

A study of the diagram on page 8 will show the various courses offered within this general organization. The figures of enrolment on this chart and in the accompanying comment are for the month of November, 1933.

Pupils entering school at 6 years of age are enrolled in the Elementary Schools where they are taught Reading, Writing, Spelling, English Composition, and Arithmetic, during the six grades. All pupils spend a portion of each day in Physical Training and play, Music and Art form an important part of the programme and a beginning is made in the study of History, Geography and English Grammar. Even within this group are to be found pupils whose mentality clearly indicates the impossibility of their being profitably continued in the ordinary class. For some years the Winnipeg School Board has carefully selected such pupils and enrolled them in Special Classes where the subjects of study and methods of tuition are more suited to their abilities

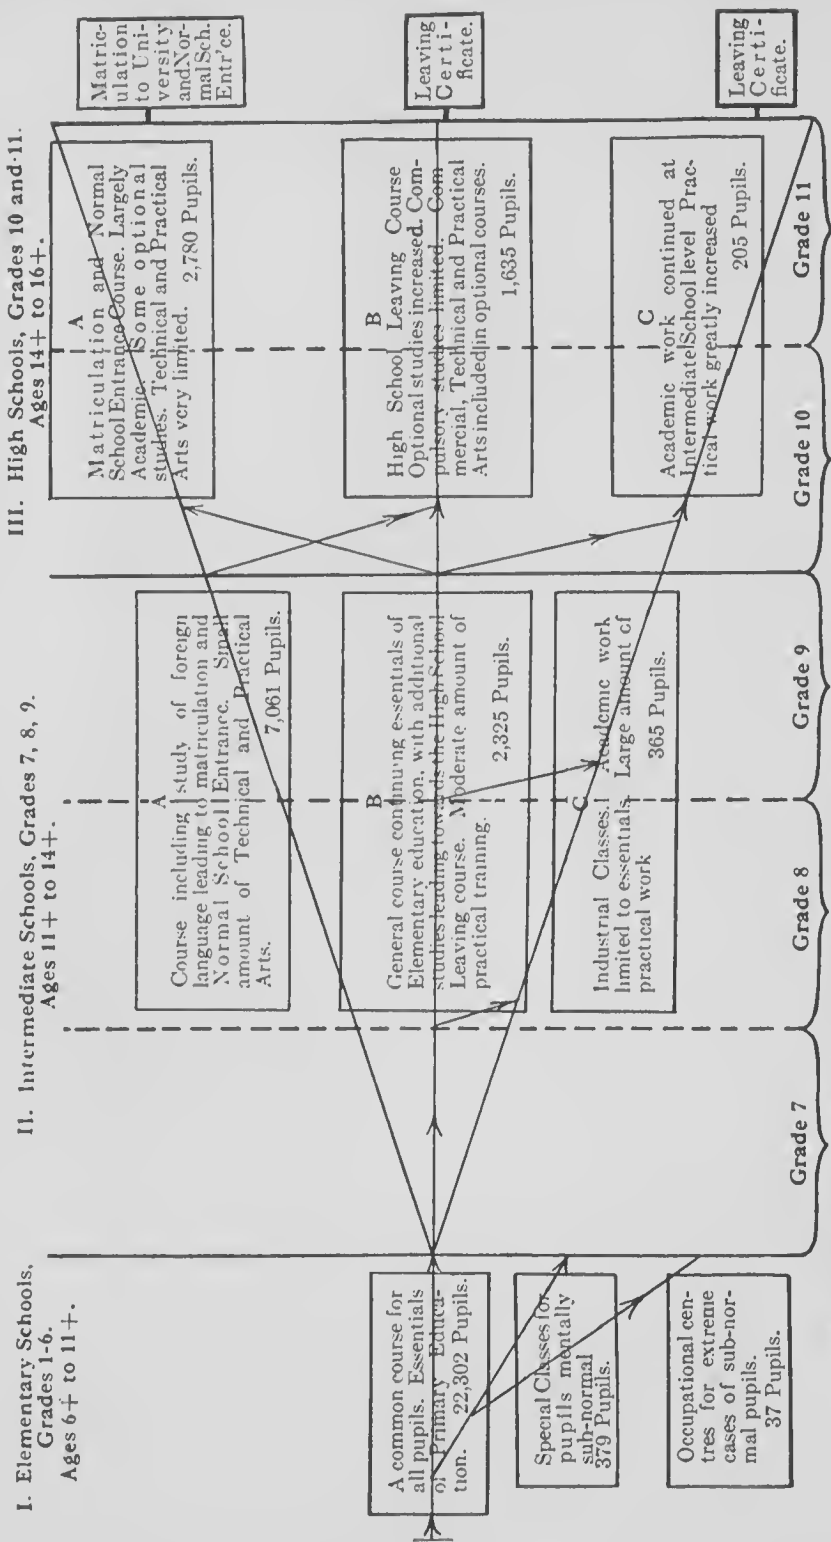

Chart: Showing classification of pupils of Winnipeg Public Schools.

and interests, their education being continued at the Elementary School stage until they are of age to leave school. A group of still lower mentality are enrolled in occupational centres heavily subsidized by government grants. In these classes pupils are given a helpful environment, congenial occupation, and training that should better fit them to become useful members of society. Reports for November showed an enrolment of 22,302 pupils in the regular elementary classes, 379 pupils in the special classes for subnormal pupils and 37 pupils in the occupational centres.

The normal age of pupils leaving the Elementary grades is 11. At this point they enter the Intermediate Schools and are classified into three main divisions as follows:

(A) This group is made up of pupils whose ability and interest, as indicated by their performance in the Elementary Schools fit them to continue their academic studies, and to enlarge their range with a view to making the possibilities of selection for later studies or for life-work after leaving school as wide as possible. The training in fundamental subjects begun in the Elementary Schools is continued, but other work, mainly preparatory to High School courses, is introduced. A foreign language is begun; the formal study of Science is introduced; Mathematics, formerly consisting only of Arithmetic, now includes Geometry and Algebra. If the experience in Grade 7 justifies the classification made at the end of Grade 6, and the ability and progress of the student so warrant, a second language, Latin, may be taken in Grade 8, so that students remaining in this division at the end of Grade 9 should be well qualified to enter High School in a course leading to further study at the University or Normal School. November figures give 7,061 pupils in this division of the Intermediate Schools.

(B) These are pupils whose performance in the Elementary Schools indicates that they probably will not continue their studies beyond the High School stage but will leave school either at

or before completing Grade XI to enter some field of employment. For these, more emphasis is placed upon the fundamental subjects and less upon those which are merely preparatory for further study. The course assumes a practical trend. English and Arithmetic are given more prominence and no foreign language is required. Subjects of common importance to the average citizen such as Health training, Elementary Science, Geography, History, Civics, Art and Music are continued. More time is devoted to such practical studies as are to be found in the Manual Training and Technical shops for boys or in the Home Economics classes for girls. This group is reinforced from time to time by pupils whose experience in the more purely academic courses of division (A) indicates that a change to course (B) would be advisable. Such change can be made at any time without loss to the pupil. It is also true that students of division (B) whose life-work selection makes it necessary for them to take courses in High School leading to University or Normal School may change at the end of Grade 9 to division (A) provided their ability and progress warrant such change. 2,325 pupils were enrolled in division (B) of the Intermediate Schools in November.

(C) Pupils whose experience in the Elementary School indicates that their interest is mainly practical rather than academic. Such students require a medium of education quite different from that of the regular academic courses. For these, during the past year industrial classes have been provided. Training in the fundamental subjects of the elementary course is continued, and given a practical emphasis, a much greater allotment of time than formerly is made to Manual Training and Home Economics. The curriculum for this division apart from these two factors is now the subject of experimentation in a number of schools throughout the City and it is hoped that in the course of a year or two a body of experience will be available for the future guidance of the Board so that a sound and profitable training may

be given these pupils. Transfer to this division is possible at any time from divisions (A) or (B) as students in the Intermediate department of the schools, under wise direction, gradually find the places where their best educational progress can be made. These industrial classes of the Intermediate Schools enrolled 365 pupils in November.

The courses in High Schools continue in the three main divisions established in the Intermediate School, although transfer of pupils from division (A) to division (B) and from (B) to (C) is quite possible and even frequent at any point in the course. In division (A), containing 2,780 pupils, the course is purely academic in character and determined with more or less rigidity by the fixed requirements of the University. Within these requirements a few optional studies are provided, including a limited choice of academic studies, Technical Training for boys intending to enter courses of applied Science, Home Economics for girls, a Commercial option, and a Music option. In course (B), with 1,635 pupils, a wide range of optional studies is offered so that a student may elect almost any course suited to his ability, interest and future needs. Studies may be mainly academic or mainly practical in character; they provide opportunities for Commercial training, or the pursuance of any department of study for which the student shows capacity, such as Mathematics, Science, English, History, Music, Art, Technical Training or Home-making courses. It will be noticed that the proportion of pupils taking this course in the High Schools is greater than the corresponding proportion in the Intermediate Schools. This is as it should be. Students during their experience in the Intermediate Schools discover their aptitudes and interests and many of them take advantage of the opportunity to transfer from division (A) to division (B) at the end of Grade IX.

Division (C) of the High School course, having 205 pupils, differs from division (B) in the preponderance of practical subjects and the limitation of academic studies to the minimum

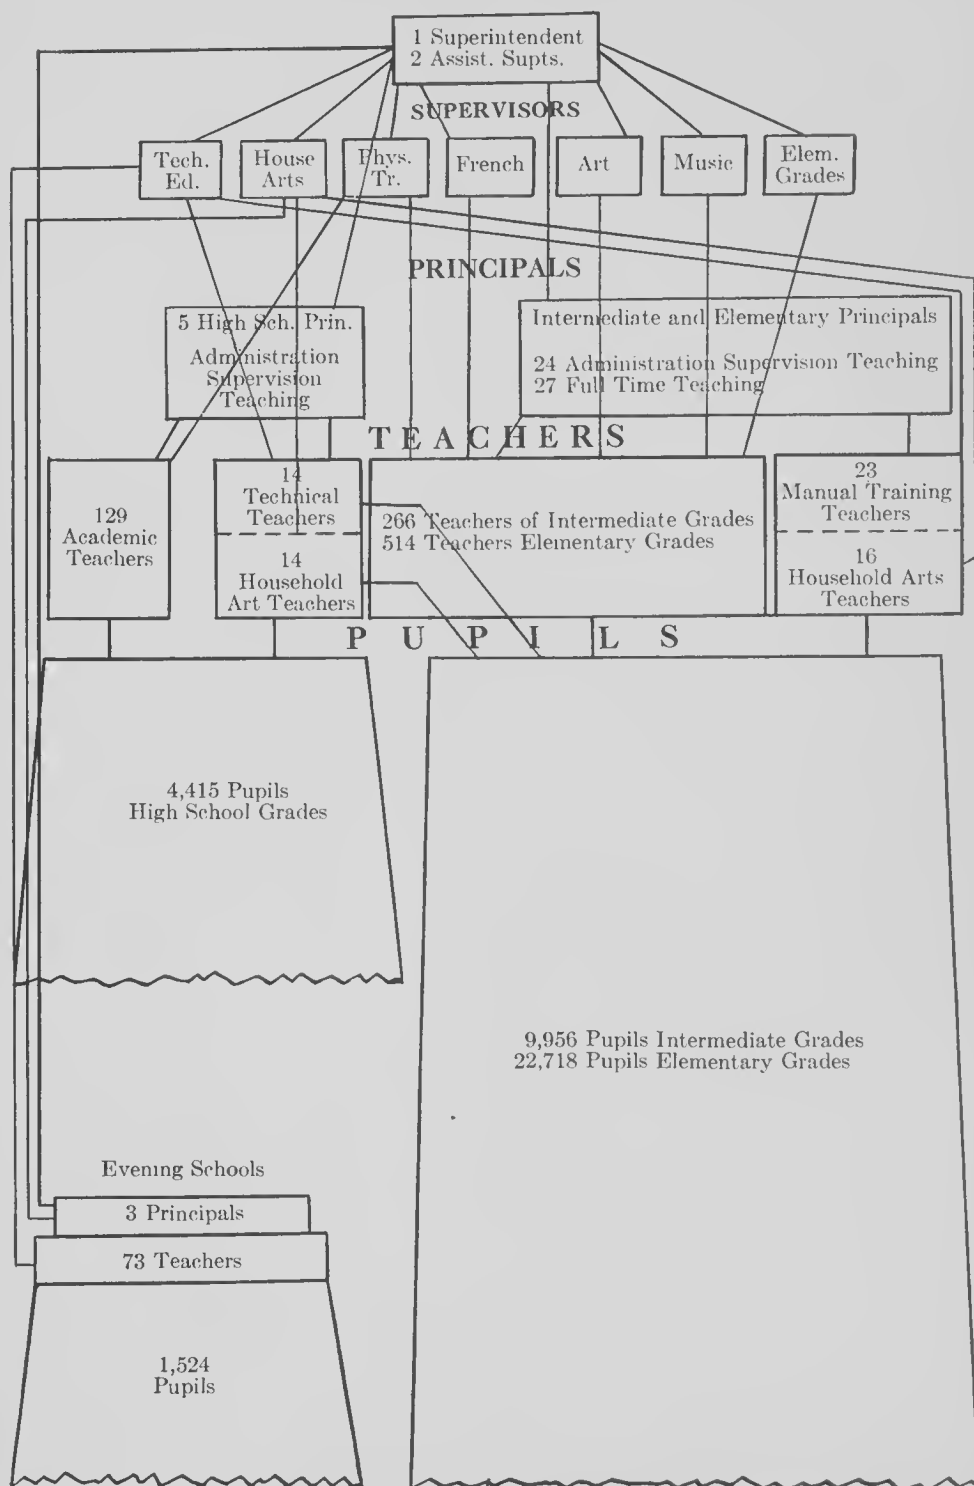

essentials of a common school education. Such work in English, Mathematics or Science as is carried on is of the most elementary type, and is closely related to the practical activities of the course. History is largely a topical study of great movements of vital interest to the present day. Geography, a study of world trade and a medium through which pupils may reach an understanding of other peoples and their life in other lands. The academic work in this division is an attempt to review and remedy defects in the early education of these pupils, to open avenues of interest, create habits of industry, and foster appreciations and attitudes which go to the making of a good citizen. If at the same time some practical training can be given which will enable the student to find a suitable life-work and give him a start towards proficiency in it, the school will have accomplished much. The proportion of students at present enrolled in these classes is small, no doubt due to the fact that their organization is comparatively new and the course of study still in the experimental stage. As time goes on, the number of pupils enrolled in these classes may be expected to increase.

Educational Administration and Supervision

The organization of the schools for the work of administration, supervision and teaching is shown in the diagram on page 13. Figures included in this diagram and its explanation are for the month of November, 1933. The educational services of the Board under the School Management Committee are in charge of the Department of Superintendence, consisting of the Superintendent and two Assistant Superintendents. Their work is administrative and supervisory. On the administrative side they are responsible for organization of the schools, classification and distribution of pupils, assignment of principals and teachers, and recommendation to the Board of appointments to the teaching staff. They attend all meetings of the Board, all meetings of the School Management Committee and all other meetings of committees or

WINNIPEG PUBLIC SCHOOLS

Educational Administration and Supervision

sub-committees to which they are called. As officials of the Board they advise on matters of general policy, interpret policies adopted and established and give effect to them, as well as to all decisions of the Board relating to the work of the schools. In their supervisory capacity, they visit the schools to inspect the work of principals and teachers and to assist them by suggestion and example in making the educational work as effective as possible. They deal with problems of discipline and other matters which are referred to them by the principals or which come to their attention through communications from parents.

In the work of supervision, the Department of Superintendence is assisted by six supervisors of special subjects and four supervisors of elementary grades. The special supervisors include one for each of the following subjects: Technical Education and Manual Training for boys, Household Arts for girls, Physical Training, French, Art, Music. They visit regularly the teachers over the whole system and give detailed direction to the work of their special subjects. They plan courses of study, assist the teachers and test the work of the pupils. The four general supervisors of elementary grades visit the teachers of the Elementary Schools in which the principals do full time teaching and have no time to supervise in detail the work of other teachers in their schools. They also supplement the work of supervising principals in the larger schools by assisting in the direction of the teaching in the primary grades. They maintain standards of achievement in all phases of the work under their charge at each stage in the progress of the pupils. They test pupils from time to time, advise principals in the matters of promotion and classification of pupils, and generally stimulate the work of the teachers by keeping them in touch with the best methods of instruction and class management.

There are fifty-six school units housed in sixty-seven buildings, the principal in many cases having charge of two buildings and in one case of three

buildings on the same ground. Of these fifty-six, five are High Schools, two are purely Intermediate Schools, thirteen Intermediate Schools with elementary departments, eleven Elementary Schools with intermediate grade classes, and twenty-five are purely Elementary Schools. Twenty-nine of the schools which have an enrolment of 16 or more classes are in charge of supervising principals. They contain in all 682 classes and 27,944 pupils or an average of 24 classes or 964 pupils per school. A supervising principal is responsible for the general administration of a large school, spends a considerable portion of his time in actual teaching, is required to give detailed supervision to the work of the teachers, and whenever possible, takes the place of an absent teacher in order that a substitute teacher may not be necessary. The remaining twenty-seven principals of smaller schools are full time teachers and are responsible for the work of the school as a whole, as well as for the work of the class which they register. Because they have little or no time for supervision of the work of their teachers, this work is taken over by the four elementary grade supervisors who regularly visit the 238 classes of these schools. In addition these supervisors, as has already been mentioned, visit the primary grades in a number of the larger schools under supervising principals and are responsible for some twenty-one special classes of subnormal pupils.

Teachers of the staff other than principals and supervisors, include 157 High School teachers and 780 teachers of the Intermediate and Elementary Schools; of the 157 High School teachers, 129 are engaged in Academic work, 14 in Technical work for boys and 14 in Home Economics for girls. Of the 780 teachers of the Elementary and Intermediate Schools, 741 are occupied with academic subjects, 23 with manual and mechanical arts for boys and 16 with Home Economics for girls. The 28 Technical and Home Economics teachers of the High Schools devote a large proportion of their time to pupils from the Intermediate Schools of

whom 1,212 boys and 1,396 girls visit the High Schools at least one half-day, and in the case of industrial classes two half-days or more, each week, for work in the shops or Home Economics centres.

There are now three Evening Schools having three principals and seventy-three teachers. In the administration and supervision of these schools the department of Superintendence is assisted by the Director of Technical Education and the Supervisor of Household Arts who organize and supervise the work of their respective departments. Reports for November show an enrolment for that month of 1,376 pupils of whom 148 are taking work of Elementary School standard, 568 are enrolled in High School Academic and Teachers' Courses and 660 are in High School Technical courses including work for men in the shops, Home Economics courses for women and Commercial courses. A more detailed statement of the work of these schools for the calendar year is given later in this report.

Appointments

Twenty teachers were appointed to the staff during the calendar year, 6 of those being assigned to the Elementary grades, 8 to the Intermediate grades, 2 to the High School department and 4 to Manual Training classes. The experience of these teachers previous to appointment was as follows:

One year's experience as a pupil teacher	1
Two to three years' teaching experience	3
Three to four years' teaching experience	2
Four to five years' teaching experience	7
Five or more years' teaching experience	7

Of the twenty teachers appointed ten were men and ten women. Of the ten men four were assigned to manual training classes and six to the intermediate grades. For some years the Board has followed a policy of selecting the best available young men in the profession and adding them to the Intermediate school staff. The presence in

these schools of large numbers of boys at the critical adolescent period of their lives requires that this policy should be continued.

Of the sixteen teachers assigned to the academic staff six hold University degrees, eight first class academic certificates, and two, of long and successful experience, academic certificates of the second class. The four manual training teachers appointed had all met the qualifications required by the Department of Education for such teachers.

Resignations

Twenty-eight teachers and two supervisors resigned from the staff and four others died in service during the year. The length of service of these employees with the Board is given in the following table:

5	3 years	2	13 years	2	24 years
1	4 years	3	14 years	2	26 years
1	6 years	2	16 years	1	27 years
2	7 years	1	17 years	1	28 years
1	8 years	2	18 years	1	29 years
1	10 years	1	20 years	1	41 years
1	12 years	3	21 years		

Special mention in this connection should be made of the withdrawal from the service of Miss A. R. Gordon, Supervisor of Elementary Grades, and of Miss M. Neilson, Assistant Supervisor of Household Arts, the former having served as teacher, principal and supervisor for forty-four years, twenty-nine of which were spent in the Winnipeg schools, and the latter as teacher and supervisor for forty-one years in Winnipeg. Nine others who, in addition to their services outside of Winnipeg, have taught in Winnipeg schools for twenty years or more are: Mrs. G. E. Palmer and Mrs. H. Fraser, Misses B. Doyle, L. V. Steere, F. E. Kelty, E. M. Rose, S. T. Baird, L. J. Irving, and O. M. Jones. Your committee also records with regret the death while in service of Misses E. Corrigan, M. Kerr, M. E. McFarlane, and Mrs. E. L. Conn. It is fitting that the Board should acknowledge with gratitude the

great contribution made by all these teachers to the training of the young people of this City.

Economies

Owing to the very serious limitation in the revenues of the Board occasioned by the financial difficulties of the City of Winnipeg your committee has been forced into a policy of the strictest economy and even retrenchment in the various services which it directs. A major economy was effected by imposing a reduction of approximately 20 per cent in the salaries of principals and teachers with proportionate reductions in salaries of all other employees of the Board. Schools were closed for the school year on June 15th, producing a further saving of 5 per cent in salaries and other expenses incidental to keeping schools open. It was thought wise to discontinue tuition in Grade XII in the High Schools in September, 1932, an action which was followed in September, 1933, by the regulation already referred to, excluding from High School, students who had failed in Grade XI in June, 1933. Manual Training and Sewing formerly begun in Grade 6 have since September not been included in this grade but have been deferred to Grade 7 except in the cases of older pupils of Grade 6 for whom it is of special value. The High School technical shops for boys, formerly used to a considerable extent by students of the academic courses, have been used more exclusively this year for the general practical training required by pupils of the Intermediate Schools and especially for older pupils of the industrial classes who devote a large proportion of their time to work of this kind. Reductions in the supervisory staff included the withdrawal of one supervisor of Elementary grades, one supervisor of Art, and one supervisor of Household Arts. In an attempt to relieve the Board of part of the expense of supplying text-books free of cost to pupils of grades one to eight, a letter from the Chairman of the Board was issued to parents of all pupils of these grades in September requesting them if possible to buy their own text-books. Twenty-one per cent

of the parents written acceded to this request so that it was possible to issue texts free of charge to the remainder without large additional purchases. Further economies were effected by reductions in staff and in the time of service of the departments of Medical and Dental Inspection, and a reduction in the appropriation for Evening Schools, while the continuance of the pupil teacher plan and the assumption by principals of a large share of substitute teaching made possible a very considerable reduction in the appropriation for instructional services.

Social Problems

It is to be expected that in a time of general depression such as that through which the citizens of Winnipeg are now passing, the distress and difficulty present in many homes should result in additional problems in the schools. Probably never in the history of the City have social service problems incident to unemployment and poverty so obtruded themselves on the attention of all those connected with educational work. Children cannot attend school unless properly clothed and fed. They cannot make progress in schools without the necessary books and school supplies. Apart from all that has been done by organized relief agencies in providing food and clothing and from the assistance given by the School Board in the matter of text-books and school supplies, a great deal of self-sacrificing and effective work has been going on quietly throughout the year, particularly by Attendance Officers, School Nurses and Teachers. It is not a rare occurrence for these employees of the Board to undertake personally the relief of distress in individual cases, defraying the expense out of their own pockets or from funds raised by the schools with which they are connected. Organized efforts in co-operation with established relief agencies of the City included the exhibition provided by the department of Manual Training and Technical Education at the Model Fair, organized under the Back-to-the-Land Assistance Association, assistance given to the

same association by the Household Arts Department in the making of quilts for indigent settlers, the collection of large quantities of reading matter for use in unemployment relief camps under the Dominion Government, and the usual collection and manufacture of toys in the Manual Training shops for the Tribune Stocking Fund. The Board has been generous in allowing the use of School Buildings and equipment to Service and other clubs endeavoring to provide recreation and instruction to unemployed boys and girls. Mention is made in the paragraph dealing with the Evening Schools, of classes for unemployed stenographers maintained by the voluntary service of teachers under the Commercial Girls' Club.

In these days when it is so difficult for young men and women who have passed through the schools to find employment, it is important that all possible efforts should be made, limited only by the resources of the community, to maintain the influence of the schools over these young people, to encourage and advise them and to save the wastage of years of idleness by useful occupation. To this end, wherever there is accommodation in High School shops, Commercial and other school classes, after the needs of the regular students have been met, deserving young people are being given, some a half-day per week, some even more time, during which they come again under the influence of their old schools and improve the time of enforced idleness in preparation for the future.

Medical and Dental Inspection

Reports of the Medical and Dental Inspection departments indicate a very full year's work. Tables appended to this report show that 12,184 pupils had been examined by the Medical Inspectors during the calendar year. Of these, 6,877 were found defective and notices were sent to the homes calling attention to the defects found, of which there were 9,311. From subsequent re-examinations made in the case of 5,191 of these, 1,232 were discovered to be cured, 903 improved and 45 stationary. In the remaining 3,011 cases

further notice was sent to the homes. The Nurses' report gives the enormous total of 156,198 routine examinations and re-examinations given during the year; 11,636 visits were made to homes of the pupils, and 2,685 first aid dressings given. 1,090 cases of contagious disease were discovered by the school nurses. Figures covering the work of the Little Nurses' League and the Oculists may be found in the appended tables. At the opening of the school term in September notices were sent to parents of all pupils entering school for the first time advising them to consult their family physicians for examination of these children at the beginning of their school life. In 348 cases parents responded to this suggestion, the remaining 1,972 being examined by the school physicians. The importance of this preliminary examination is seen from the result, showing that in the 1,972 cases examined by the school physicians 1,109 were found defective, a total of 1,408 defects being discovered. In the 348 cases examined by the family physicians 165 were found defective with a total of 211 defects. The Medical Inspection Department now includes the Chief Medical Inspector who gives her full time to the work of the schools, three assistant Medical Inspectors giving half time, two oculists each giving one quarter time service and fourteen full time nurses. So as not to exceed the appropriation made to this department during the year, the staff was reduced by the half-time service of one physician and the service of assistant medical inspectors was reduced from 10 to 8 months for the year. The service of the Chief Medical Inspector and nurses corresponded with the school session, this year reduced to nine and a half months.

The report of the Department of Dental Inspection shows that during the calendar year 14,573 pupils were examined and 382 class-room talks were given by the school dentists. Of the pupils examined 11,801 required treatment and notice to this effect was sent to their parents or guardians. 22,176 operations were performed in the clinic during the calendar year. The operations included

8,273 fillings, 7,573 extractions, and 6,350 treatments. 2,933 cases were completed at the clinic. The department now includes one full time and four half-time dentists. As a result of the decreased budget the staff of this department was reduced during the year by the half-time service of one dentist and the service of all except the Chief Dental Inspector was reduced from ten to eight months, the latter officer serving during the nine and a half months during which the schools were in session.

Evening Schools

The report of the Evening Schools includes the second term of the 1932-33 session, which extended in the regular classes from January 3rd to March 13th, and the first term of the 1933-34 session which opened on October 10th and closed on December 18th. In classes conducted for students preparing for Departmental examinations it was necessary to prolong the spring term until almost the end of May in order to give time for the completion of the work prescribed.

In the elementary division the enrolment was for the most part made up of students of foreign birth who wished to review the fundamentals of the general education which they had received before coming to Canada, to obtain a good reading, writing and speaking knowledge of English and to form some acquaintance with Canadian History and Literature. A few students who had been forced to leave school before completing the work of the first eight grades were also included in the enrolment. These aim to complete their studies up to the High School entrance standard and to proceed to the more advanced courses offered in the Secondary Schools. Elementary classes were conducted at the Kelvin, Hugh John Macdonald, Norquay and Isaac Newton Schools. In the fall term the elementary classes at the Hugh John Macdonald School were transferred to the Daniel McIntyre School and those at the Norquay and Isaac Newton Schools to St. John's High School. This change has made for economy in the general

expenses of the schools, such as administration, heating, lighting, caretaking, etc. 296 pupils were enrolled in the elementary department during the spring term and 160 during the fall term. The corresponding numbers of teachers employed were 15 and 7.

In the secondary department, academic and technical courses were offered as usual, the former at the Daniel McIntyre Collegiate Institute and the latter at the Kelvin and St. John's High Schools, although commercial classes and classes in Printing, Steam-Engineering, and Household Arts were provided at the Daniel McIntyre School, and classes in Physics and Chemistry for Grade XII pupils were conducted at St. John's High School. In the various academic courses the regular work prescribed for Grades IX to XII inclusive was carried on, and in addition, English for the Grade A Teachers' Certificate. During the 1932-33 session 548 pupils were enrolled in these courses of whom 419 continued in attendance to the end of the term. These wrote 942 papers set by the Provincial Department of Education and were successful in 785 or 83.3 per cent of the papers written. During the fall term, which is the first term of the 1933-34 session 589 pupils were enrolled in these classes. Technical courses included Home Economics, Commercial subjects, Draughting in its various branches, Practical Electricity, Auto-Mechanics, Machine-Shop Practice, Forging and Welding, Wood-Working, Wood-Turning, Printing, Steam Engineering, Shop Mathematics, Physical Training, Commercial Art and Show-Card writing. 911 pupils were enrolled in these courses during the spring term and 732 during the fall term. The enrolment in technical courses includes 170 for the spring term and 58 pupils for the fall term in classes organized by the Commercial Girls' Club for unemployed girls. These classes are being conducted free to the pupils and without cost to the Board except such as is involved in the use of class-rooms in buildings already opened for other evening school classes. The voluntary service rendered by teachers and

others interested in the promotion of this excellent plan cannot be too highly commended.

The following table presents a comparison of the aggregate attendance expressed in student evenings in 1932 with that in 1933. The comparison shows a marked decline in attendance particularly in the elementary division due largely, no doubt, to the tendency of pupils to prolong the period of their day school education, and also to the reduction in immigration of young people of foreign birth. The enrolment in the Secondary Academic courses shows a slight increase while the decline in attendance at the Technical classes, the result of unemployment in the trades represented in these classes is not so great as might have been expected owing to the difficulty which students have of paying the necessary tuition fees.

Aggregate Attendance in Student Evenings

	1932	1933
Elementary	10,217	5,768
Secondary Academic and Teachers' Courses	20,457	20,834
Secondary Technical	23,535	19,507

Music

Music in the schools has remained at the high standard of former years, the singing of the school children at the Musical Festival again receiving the highest commendation from the adjudicators.

In this connection the following quotation from an article by Mr. H. Plunket Greene, the distinguished musician, which appeared in the London "Times" may be of interest.

"In 1923 the Canadian Association of Competitive Festivals invited Sir Granville Bantock and myself to act as their judges. This was the first time they had asked the Old Country to lend a hand, so it was new ground for all concerned. After our first week at the Manitoba Festival we wrote home to say that 'there was nothing to beat Winnipeg in the British Empire.' Since then I

have paid two more visits to Canada, but that judgement still holds good."

"Half of the competitors this year were children ranging in age from 'infants' up to 17 or 18, and an afternoon with them is better than a summer holiday. Imagine 600 to 1,000 of them filling the floor of the Playhouse day after day, the treble rattle of excitement as they waited for the gun, the sudden hushes at the beginnings, the bursts of applause at the finishes, and the constant hum of battle in the air as they worked up, step by step, to the grand finale—the Earl Grey trophy for the best children's choir of the festival. That was a memorable finish. It lay between two schools, and on the technical side there was not a pin to choose between them. One was the Daniel McIntyre School (average age 15 to 18) in Birstow's three-part arrangement of Schubert's 'Lachen und Wienen'. Their singing was well-nigh perfect. It was a masterpiece of rhythm, humour and musicianship, with just the right amount of sophistication to make it a work of art. According to the audience it was all over but the shouting."

"Then came the General Wolfe School (average age 12 to 15) in Dyson's 'Fairy Song'. They had hardly started when there fell that sudden silence on the room which only comes when an audience has lost itself in surrender. Here was a thing of beauty, intangible, unteachable, such as this old stager never expects to hear again, so simple in its message that only a deep affection between the children and their conductor could have brought it about. The roar of applause when the judge, Dr. Armstrong, announced them as the winners, had nothing to do with their youth; choirs and audience alike knew that they had just heard something almost too good to be true."

During the year many matters of educational policy have been under discussion by your committee, entailing much study and investigation by sub-committees. The findings of many of these sub-committees have been very informative, and have been the basis of important decisions by the Board. Two studies, one on the cost of text-books

and the other on the absence of teachers were carried on personally by Mr. A. E. Bowles at the request of the Committee. Mr. Bowles made very full reports in these two matters which are available in the permanent files for the information of future members. In receiving these reports, the Board made grateful acknowledgement to Mr. Bowles of this voluntary service. A sub-committee to consider a retiring age for teachers was appointed during the year and was later asked to take under advisement the related matter of adequate pensions for teachers retiring from the service. This sub-committee has not yet completed its work and it will be necessary for the newly appointed Board to make arrangements for the continued study of this important matter.

Respectfully submitted,

F. G. THOMPSON,

Chairman

STATISTICAL TABLES

We have audited the books and accounts of the School District of Winnipeg No. 1 for the year ended December 31st, 1933, and have obtained all the information and explanations required by us. The position of the Current Account is stated on the basis of the requirements of the 1933 Cash Budget, and as such does not take into consideration deferred and accrued items. Subject thereto, in our opinion the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the affairs of the School District of Winnipeg No. 1 as at December 31, 1933, according to the best of our information, the explanations given to us and as shown by the books of the District.

MEMORANDUM RE BUDGET DEFICIT

as at December 31, 1932

On September 12th, 1933, on the recommendation of the Committee of the whole Board, the Board adopted its 1933 Budget on a cash basis. At that same time, also in accordance with the recommendation referred to, the following items, as at December 31st, 1932, were eliminated from the accounts and incorporated as an integral part of the carry-over from the 1932 Budget:

instalments of Principal of Debenture Debt previously budgeted for in year prior to dates of payment to Sinking Fund	\$195,141.41
--	--------------

Debenture Interest accrued not yet due, set up in the accounts as at December 31st, 1932	17,937.50
---	-----------

Proportion Evening School Fees, deferred as at December 31st, 1932	4,488.20
---	----------

\$217,567.11

Less:

Inventories of Stores, Text-books, etc.	\$ 36,341.67
Insurance and Water paid in advance	25,433.04
	<hr/>
	61,774.71

(Above items were carried forward as
assets as at December 31st, 1932)

Net Adjustment, as shown in General Revenue Account ..	\$155,792.40

We have audited the books and accounts of the Sinking Fund of the School District of Winnipeg No. 1 for the year ended December 31st, 1933, and have obtained all the information and explanations required by us.

The securities covering the investments of the Fund have been verified by actual examination and are either fully registered or registered as to principal only, in the name of the School District of Winnipeg No. 1. Cash in Bank has been confirmed by certificate from the Canadian Bank of Commerce. We have satisfied ourselves that the Sinking Fund Reserves are sufficient to cover all amortization requirements to date of Balance Sheet including Interest accrued from anniversary dates.

In our opinion the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Sinking Fund of the School District of Winnipeg No. 1 as at December 31st, 1933, according to the best of our information and the explanations given to us and as shown by the books of the Fund.

ANNUAL REPORT OF BUILDING COMMITTEE

Winnipeg, Manitoba,
December 30th, 1933

To the Chairman and Members,
Winnipeg Public School Board.

Your Building Committee herewith presents the report of the work which came under its direction during the year 1933.

Earnest consideration and studied thought has been given each item in the Maintenance Budget to avoid exorbitant costs for the years that lie ahead. The life of a structure can be doubled by proper repairs. Terrible prices are paid for neglect and indifference. Results of deferred maintenance are costly. The problem of making adjustments to meet the reduced budget must be weighed in the light of the toll which will be exacted in subsequent years.

During the year, maintenance of school grounds and buildings has been carried on by a staff of carpenters, electricians, painters and sundry workmen.

In addition to painting blackboards and marking off basket-ball and volley-ball lines, the following renovating was completed: Exterior of schools painted: Gordon Bell, Laura Secord, La Verendrye, Luxton, Principal Sparling and William Whyte. Interior of Schools decorated: Aberdeen No. 3.

Entrance doors were painted or varnished as follows: Aberdeen No. 3, Cecil Rhodes No. 1, David Livingstone, General Wolfe, Glenwood,

Gordon Bell, Grosvenor, Hugh John Macdonald, Lord Nelson No. 2, Riverview, Victoria-Albert and Queenston.

Several miscellaneous paint jobs were done which included: Anna Gibson—Room 4, Principal's Office, and moulding stained and varnished in two classrooms; Argyle—Main corridor and Room 9; Cecil Rhodes No. 1—Basement toilets, teachers' room, vestibule, staircase wall, Principal's office and back porches; Daniel McIntyre—Gymnasium floor; David Livingstone—Toilets, baseboard varnished in corridors and classrooms; Florence Nightingale—Sash painted; George V—Woodwork washed down, stained, shellaced and varnished; Gordon Bell—Principal's office and household arts room; Greenway No. 1—Toilets painted; Hugh John Macdonald—Cupboards painted under stairs and corridors decorated; Laura Secord—Rooms 1 and 5, basement room, and nurses' room; Luxton—Boys' toilet; Riverview—Principal's Office; St. John's—Principal's office; Kelvin—Corridors and a number of classrooms; Sir Sam Steele—Woodwork varnished throughout school and transoms frosted; Strathcona—Rooms 5, 6, 7, 8, 15, halls and teachers' room; Victoria-Albert—Dados painted in basement, porches; William Whyte—Brickwork cleaned; 169 Edmonton St.—Two bedrooms, living-room and halls; Montcalm—One classroom, Principal's office, medical room, ceiling of Room 6, hallways and porches; Champlain—Teachers' room and medical room; Lord Selkirk No. 2—Household Arts room, walls and ceiling of nurses' room; William Whyte—Four classrooms.

Two thousand, one hundred and sixty lights of glass were replaced this year, the glass being ordered by the case and cut in the School Board Stores. The recommendation from the Absence and Accidents Committee, that alterations be made to the glass in the entrance and vestibule doors, where there was considerable danger, received attention. The glass in a number of these doors was changed from clear glass (double diamond) to wired cast glass.

Repairs were made from time to time to plaster ceilings and walls. In some cases repairs were minor, but at other schools, considerable patching was done.

Fences requiring repair were as follows: Alexandra, Anna Gibson, Argyle, Champlain, David Livingstone, Earl Grey, Faraday, George V, Gordon Bell (chain link and wooden), Hugh John Macdonald, Isaac Brock, Isaac Newton, Kelvin, King Edward No. 1, John M. King, Machray No. 2, Montcalm (chain link), Mulvey, Principal Sparling, St. John's, Sir Sam Steele, Somerset, Strathcona, Victoria-Albert, Wellington and Wolseley.

At a number of schools repairs were necessary to sidewalks, both wooden and cement. The following received attention: Aberdeen No. 3, Alexandra, Anna Gibson, Cecil Rhodes No. 1 and 2, Daniel McIntyre, Florence Nightingale, General Wolfe, Greenway No. 2, Hugh John Macdonald, Lord Roberts No. 1 and 2, Machray No. 2, Ralph Brown No. 2, Robert H. Smith, St. John's, Somerset, Strathcona, Wellington, Wolseley, Isbister.

Football goal posts and volley-ball posts were erected or repaired where necessary.

Outside steps were repaired or replaced at the Argyle, David Livingstone, Dufferin, Faraday, Hugh John Macdonald and 159½ Edmonton St.

Outside platforms were repaired at the Champlain (new platform built), Faraday and Robert H. Smith.

Drains on the grounds were cleared at the various schools. A catch-basin was installed at the Queenston School. Catch-basin was repaired at Mulvey School.

Repairs were made to eavestrough and down-pipes, including the Anna Gibson, Argyle, Daniel McIntyre, Fort Rouge, Greenway No. 1, Laura Secord, La Verendrye, Lord Selkirk No. 2, Machray No. 1, Mulvey, Norquay No. 1, St. John's, King Edward No. 1 and Principal Sparling schools.

Cornices were repaired at Principal Sparling and William Whyte schools.

As in the past, repairs to the roof were required at a number of schools. In some instances only minor repairs were necessary, while at other schools the repairs were extensive. Repairs were made as follows: Aberdeen No. 1, 2 and 3, Argyle, Cecil Rhodes No. 1 and 2, Earl Grey, Florence Nightingale, Fort Rouge, General Wolfe, Gordon Bell, Greenway No. 1 and 2, Isaac Brock, Isaac Newton, Isbister, Julia Clarke, Kelvin, King Edward No. 1 and 2, Laura Secord, Lord Roberts No. 1 and 2, Machray No. 1 and 2, Montcalm, Pinkham, Ralph Brown No. 1 and 2, Riverview, Somerset, Strathcona, Wellington, and 159 Edmonton Street.

Windows were caulked on the outside at the following schools: Gladstone, Greenway No. 2 (skylight only), Laura Secord and R. H. Smith.

At other schools, windows and doors required repairs. The following were included in the work done: Aberdeen No. 1 and 3, Alexandra, Anna Gibson, Cecil Rhodes No. 2, Champlain, Daniel McIntyre, David Livingstone, Faraday, Florence Nightingale, General Wolfe, George V., Gladstone, Gordon Bell, Hugh John Macdonald, Isaac Brock, Kelvin, King Edward No. 1, Laura Secord, La Verendrye, Lord Nelson No. 2, Lord Selkirk No. 1, Luxton, Machray No. 1 and 2, Mulvey, Principal Sparling, Robert H. Smith, St. John's, Sir John Franklin, Sir Sam Steele, Victoria-Albert, Queenston, Wellington, William Whyte, Wolseley, John M. King, School Board Offices (3rd floor), Lord Roberts No. 1, Montcalm.

Twenty door-checks were replaced through the schools and others were adjusted or repaired, the work being done by men in the regular employ of the Board.

Three hundred and eighty-three feet of additional handrailing was erected in the following schools: Earl Grey, Gladstone, Gordon Bell, Isbister, Fort Rouge, John M. King, Kelvin, King

Edward No. 2, Machray No. 1, St. John's, Somerset, Strathcona and Daniel McIntyre.

Repairs to handrails and stairs were made as follows: Grosvenor, King Edward No. 2, Laura Secord, Lord Selkirk No. 1, Pinkham, Principal Sparling, Victoria-Albert, Wellington, School Board Offices, Dufferin, Hugh John Macdonald, Lord Nelson No. 2. Mastic stair treads that were becoming dangerous, were repaired or replaced at the following schools: King Edward No. 1, Lord Selkirk No. 1, and Machray No. 1.

Floors, both wooden and cement, were repaired at Champlain, Dufferin, Earl Grey, Fort Rouge, Lord Selkirk No. 2, Pinkham, St. John's, Wellington, William Whyte, 157 and 169 Edmonton St., Lord Roberts No. 1 and R. H. Smith.

Brickwork was repaired at various schools, as follows: Gordon Bell, John M. King, Lord Roberts No. 2, Lord Selkirk No. 2, Robert H. Smith, St. John's and Kelvin.

A few more extensive repairs and alterations were made as follows:

Anna Gibson—Ten-test put over blackboard in Principal's office.

Cecil Rhodes No. 1—Partition taken down in Manual Training room.

Cecil Rhodes No. 2—Extensive repairs to sash.

Dufferin—New step built on stairway in boys' basement.

Gordon Bell—Moveable panel put in chain link fence.

Kelvin—Blackboard erected in Chemistry room.

King Edward No. 1—Linoleum laid in Principal's office.

Montcalm—Alterations made to roof. Chain link fence erected.

Mulvey—Extensive repairs to stairs from first floor to basement. Partition erected in auditorium to form classroom.

St. John's—Balcony railing erected. Battleship linoleum laid in Principal's office.

Queenston—Cement sidewalk laid.

Edmonton Street Houses—Verandah, basement floor and steps repaired at 159½. Partition taken down at 169.

At the request of the Commissioner of Supplies a number of new cabinets, tables, benches and separate equipment were constructed, while repairs were made to both furniture and equipment. The renovating and moving of school desks was completed where authorized.

In order to accommodate the increase in High School students, alterations were made in the laboratory at the Isaac Newton school. Equipment was taken from the Earl Grey and renewed and altered to meet the necessary requirements.

All flagpoles were inspected. The two blown down, at David Livingstone and General Wolfe schools were replaced by new steel poles. The flag-poles at Sir Sam Steele and Isaac Newton schools were cut down and replaced.

The following is a summary of the major Plumbing, Heating and Ventilation Repairs and Alterations attended to under the Chief Operating Engineer's Department during the year 1933.

Plumbing

Isbister School—Hot water heater and tank installed. This completes this service at all wood burning schools excepting Fort Rouge, Lord Nelson No. 1 and Julia Clarke. Discontinued shower bath tanks were used for this purpose, also reconditioned wash hand basins.

Norquay No. 1 School—A new copper water supply pipe from the street main to the school was installed.

Isaac Newton School—Science room plumbing installed and all tables connected to sewer and water service pipe.

Machray No. 1 School—The fire service pipe which was badly pitted underground was replaced with overhead installation. This work was done at several other schools also.

The usual repairs to plumbing, etc. were attended to at all schools during the year and in all cases material for repair work was selected on reliable guarantee of durability.

Heating and Ventilation

Gordon Bell School—New heating coils were installed in the ventilation plant.

Isaac Newton School—Exhaust system for ventilating science room was built and installed.

Daniel McIntyre Collegiate—Underfeed mechanical stoker was installed. This stoker has shown a decided saving, carrying the whole heating and ventilation system with one boiler.

Dufferin School—New smoke pipe from hot air furnace replaced.

William Whyte School—Hydraulic ash hoist installed.

All hot air furnaces were repaired and tested during the summer vacation period and all operating steam boilers were examined and inspected and all minor repairs attended to.

Fairly extensive repairs were made to motors, ventilation fans, centrifugal pumps, air compressors and thermostats, etc.

This service is looked after entirely by our own mechanics and the parts are made and repaired in the workshop at the Champlain Stores.

In addition to maintenance of telephone, fire-alarm, lighting, clock and bell systems, improvement in the lighting was made in the Machine Shop and Art Room (Room 40) Kelvin school. Necessary lighting was installed in the temporary classroom at Mulvey school; the lighting was changed in a basement room at Principal Sparling, and

alterations made to four lighting units at Luxton school. Repairs were made to motors and electrical equipment when necessary for the Department of the Chief Operating Engineer.

Increased Physical Training activities necessitated the placing of guards over lights in the gymnasium at Isaac Newton school.

Other sundry repairs have been made as the need arose, including repairs to hat and coat rails, sash cords, back-filling of foundations, and filling in under chain-link fences.

In order to assure the Board that sufficient means of egress is provided in the schools, an inspection of all schools was undertaken by the Building Inspection Department of the City of Winnipeg, and alterations were made where recommended. Three schools required major alterations, namely: Champlain, Lord Nelson No. 2 and George V. Although all recommendations have not yet been attended to, they will receive the attention of the Building Department at the earliest opportunity.

Satisfactory adjustment was made by the Insurance Companies to the amount of \$1913.18, covering the fire damage at Aberdeen No. 3 school.

Settlement took place on the North side of the Wolseley school, and considerable under-filling had to be done to bring the building back to normal.

Materials used in the Building Department were carefully selected, resulting in economies, ever keeping in mind price and durability. While it may be tempting to select materials on a price basis, such practice only leads to false economies through a duplication in the cost of labor.

Community Use of School Property

As in the past, numerous applications were received for use of our schools from outside organizations. Permission to use the auditoriums and gymnasias was granted to responsible applicants,

for periods varying from one hour to two evenings per week. The total number of permits issued was four hundred and six.

Your Committee wishes to thank the Board for the spirit in which all recommendations were received for approval.

Respectfully submitted,

M. W. STOBART,

Chairman.

ANNUAL REPORT OF SUPPLY COMMITTEE

December 31st, 1933

To the Chairman and Members,
Winnipeg Public School Board.

Your Supply Committee submits herewith a summary of its activities for the year ending December 31st, 1933:

(1) Purchase by tender of materials required was made as follows:—

Annual Report of the Board for the year 1932—
1,000 copies from the Winnipeg Printing and Engraving Company, at a cost of \$173.26.

Stationery to the value of \$8,434.55 from the following:

Systems Equipment, Limited	\$5,866.50
Willson Stationery Company	1,455.40
E. N. Moyer Company, Limited	930.90
T. Eaton Company, Limited	181.75

Fuel to the value of \$70,409.50, from the following:

Coal:

Firm	Tons	Description	Price
Swail Brothers Coal Co. Ltd.	2,500	International Screenings	\$6.47
Halliday Brothers Ltd.	1,500	Bellevue Screenings.....	6.65
Halliday Brothers Ltd.	2,000	Greenhill 1½ Steam ...	6.65
Halliday Brothers Ltd.	150	Lignite Lump	6.93
Empire Coal Co.	1,000	Cadomin Screenings...	7.05
D. E. Adams Coal Co.	300	Pembina Peerless Nut..	7.10
Harstone Coal Co.	2,000	Michel Screenings	7.50

N.B.—All of the above coal comes from mines in Western Canada.

Wood:

Firm	Cords	Description	Price
McCracken Brothers	1,400	Jackpine	\$4.10

Manual Training and Technical Lumber to the value of \$5,216.10:

Canadian	American	
Basswood	Red Gum—Plain	} D. Ackland & Son \$4,334.34
Brown Ash	Red Gum—Q.C.	
Birch	White Oak—Plain	
Bird's Eye Maple	White Oak—Q.C.	
Mahogany (British)	Whitewood	} Empire Sash & Door
Clear White Pine	Whitewood	
White Pine No. 1 Com.		\$764.76
Clear White Pine		} Brown & Rutherford
White Pine No. 1 Com.		
		\$117.00

School Desks. No. 1 Single, made in Winnipeg by the Gregg Manufacturing Company:

228 desks	} \$2,455.72
36 fronts	
36 rears	

Paper Towels and Toilet Paper as follows:

300 cases Paper Towels	
from Interlake Tissue Mills	\$1,075.00
200 cases Toilet Paper	
from Mid-West Paper Sales Co.	950.00

(2) The following supplies were purchased direct from the manufacturers in England. These articles are not manufactured in Canada.

5500 gross Pen Points	British Pens Limited	\$1,803.14
Elem. Drawing Material	Arnold & Sons, Leeds	246.63

(3) All other supplies required for the operation of the school system were, where possible, purchased from Canadian and local firms. Purchase orders issued in this connection averaged approximately 400 per month. A few of the most important articles are:

Article	School
1 Kardex Cabinet and Table	Gordon Bell High
4 Kardex Units	Isaac Newton High
4 Rangettes for teachers' lunch rooms	Isaac Newton, St. John's Laura Secord, Riverview
1 Sewing Machine	Lord Nelson No. 1—Household Arts
375 gross Writing and Drawing Pencils	Elementary and Junior High Schools
Science Supplies	Junior High and High Schools

(4) Textbooks:

Grades 1 to 8. On account of the difficult financial situation, the Board considered it advisable to make an effort to reduce the cost of the issue of textbooks in these grades. Forms requesting parents who desired the issue of free textbooks to their children, as in previous years, were sent out through the principals, and every pupil in these grades was provided with this form. The result was that approximately 21 per cent of the enrolment purchased their texts. Through this and other economies, it was possible to reduce the expenditure for textbooks by approximately \$10,000.00.

Grades 9, 10 and 11. As in previous years, the Board authorized the issue, on loan, of textbooks and the necessary supplies to pupils in these grades, whose parents, owing to the continued depression, found it impossible to purchase these. The cost of this service was, in 1932-1933, \$1,481.90, and in 1933-1934, \$3,750.00.

Supplementary Readers required for Grades 1, 2 and 3, were purchased direct from the following Canadian and British publishers, at a cost of \$950.00:

W. J. Gage & Company
Longmans, Green Company
Macmillan Company of Canada
Thos. Nelson & Sons

and for Grades 7, 8 and 9 from the Manitoba Textbook Bureau, at a cost of \$160.00.

(5) Furniture and Equipment was made by workmen under the jurisdiction of the Commissioner of Buildings, as follows:

Article	School or Department
34 Footscrapers.....	Various
12 Sand Tables.....	Various (Special Classes)
1 Wardrobe.....	Gordon Bell (Household Arts)
4 Basketball Goals.....	Earl Grey and Isaac Newton
312 Planing Boards.....	Manual Training Centres
146 Bench Hooks.....	Manual Training Centres

(6) **Repairs and Renovation of Furniture and Equipment.** In this connection it should be noted that, though several new schools have been furnished throughout, so thorough has been the system of renovation and repair, that a minimum of new furniture and equipment has been purchased. It should be borne in mind, however, that replacement of certain items cannot much longer be deferred.

(a) In addition to the routine repairs of school furniture and equipment, desks in the following schools were painted:

Champlain
Gladstone
Grosvenor
Isbister
Lord Roberts No. 1
Lord Roberts No. 2
Queenston (2 rooms only)

(b) **Typewriters and Sewing Machines.** All machines in the system were inspected during the summer vacation by qualified mechanics in the employ of two local firms, the service on the sewing machines being free, the only cost to the Board being the replacement of necessary parts. The service on the typewriters was given at an extremely low figure. The necessary adjustments required during the school year were made on the same terms. In possession of the Board there are:

348 Typewriters
119 Sewing Machines

(c) **Window Blinds.** The yearly inspection, renovation and replacement of these was made during the summer vacation by a local firm, at a cost of \$1,100.00, a minimum number of new blinds being purchased.

(d) **Piano Tuning.** This work was carried out by qualified blind tuners, who are members of the Chartered Institute of Piano Tuners. The number of pianos tuned was 70.

(7) **Physical Training Equipment and Supplies:**

(a) Some of the original equipment purchased to equip the gymnasias of the Technical High

Schools in 1913, was this year re-conditioned by our own workmen and re-issued to schools.

(b) **Football, Baseballs and Bats.** In order to stimulate interest in school sports, the Board again authorized the issue of one football and one baseball and bat to each school, and to the larger schools two of each. The cost of these was \$450.00, and the number issued was 61 footballs and 73 bats and balls.

(c) **Football Goals.** In an endeavour to reduce the cost of maintenance of football goals, which has in recent years been heavy, a new type of goal made of used iron pipe was put up on the grounds of the Lord Nelson School, and has so far proved satisfactory.

(d) Other equipment and supplies as follows were purchased from funds of the Schools' Athletic Association:

20 pairs Jumping Stands	
18 8-lb. Shots	
20 Stop Watches	
6 Vaulting Boxes	
56 Banners	
Music Stencils	
29 ½ yards Sand	} for Jumping Pits
600 bags Sawdust	

(8) **Manual Training and Household Arts, Grade 6.**

The discontinuance of Manual Training and Sewing in this grade made available a quantity of equipment. Benches and tools from the manual training centres were used to bring the equipment in continuing centres up to establishment, without the purchase of new articles. The electric irons and sewing tables were distributed for the same purpose, where necessary.

Six manual training benches and a number of tools were loaned to the Good Neighbours Club, a centre at 179 McDermot Avenue, for single unemployed men, organized by a group of prominent women of the city.

(9) Scrap Metal.

A limited quantity of scrap metal was purchased for use in the sheet metal, forge and machine departments, thus materially reducing the cost of supplies.

(10) Eyeglasses.

These were again supplied on recommendation of the Chief Medical Officer, at a cost of \$790.00. Purchase orders for these were distributed among various opticians of the city.

163 pairs—purchased outright by the Board
72 pairs—part paid for by Board and part by parents
47 pairs—repaired

(11) Isaac Newton.

The temporary use of this school for high school purposes made necessary the equipping of a Grade 11 science room. This was accomplished by the transfer of science tables, supply cabinet and apparatus no longer needed in the Earl Grey School. All this equipment was thoroughly renovated, no new furniture being purchased.

Although the appropriations coming under the jurisdiction of this Committee were reduced to a low figure, through careful supervision in the purchase and the hearty co-operation of the principals and teachers in the use of supplies, it is probable that there will be a small surplus.

Respectfully submitted,

F. A. SMITH,
Chairman

CHAIRMEN OF WINNIPEG SCHOOL BOARD
